

Anirban Chakravertty

Aspiring Data Engineer | Python

Bhopal, India | +91 8989405679 | anirbanchakravertty802@gmail.com |
linkedin.com/in/anirban-chakravertty

Summary

AI/ML engineer with hands-on experience building generative AI pipelines, distributed backend systems, and data-intensive analytics products. Proficient in Python, FastAPI, Go, PySpark, and SQL with a focus on LLM applications, RAG, and production-grade ML evaluation.

Professional Experience

Yash Technologies

Oct 2025 – Mar 2026

Python Developer Intern

Indore, India

- Architected an end-to-end Streamlit analytics web application for Equinox Fitness, surfacing KPIs for 200+ enterprise clients and driving data-informed operational decisions.
- Built a Power BI dashboard over 10,000+ job listings and engineered Python/SQL data-cleaning pipelines achieving 99% reporting accuracy, reducing manual processing overhead.

Incubyte

Jun 2025 – Aug 2025

Deal Analytics & Strategy Intern

Gurgaon, India

- Developed scalable ETL workflows on Databricks using PySpark, transforming large-scale structured datasets for downstream analytics consumption.
- Authored custom Deneb visualizations in Power BI and contributed to a modular pipeline framework, accelerating development of new visual components across the team.

Projects

RAG-Based Document Intelligence Platform

- Built a production-style RAG system with FastAPI and Streamlit — full ingestion, chunking, semantic embedding, vector search, and LLM prompt orchestration — enabling accurate multi-document Q&A with source citations.
- Implemented an evaluation pipeline tracking retrieval quality, response accuracy, and end-to-end latency for production-grade reliability.

Concurrent Distributed Job Queue with Real-Time Dashboard

- Engineered a distributed task-queue system in Go using `net/http`, goroutines, and channels with Redis as the message broker, supporting concurrent multi-worker job processing.
- Delivered a real-time web dashboard visualizing queue depth, job throughput, and individual worker activity, enabling live observability of distributed system state.

Taskq-bench — Job Queue Load Testing CLI

- Built a Go CLI tool for benchmarking Redis-backed task queues, measuring producer/consumer latency and throughput under configurable concurrent worker pool loads.

Technical Skills

Languages: Python, Go, SQL, JavaScript, C

AI / GenAI: Generative AI, LLMs, RAG, Prompt Engineering, Semantic Search, Embeddings, NLP, Model Evaluation

Frameworks & Libraries: FastAPI, Streamlit, Pandas, TensorFlow, LangChain

Data Engineering: PySpark, Databricks, ETL Pipelines, SQLite, MySQL Workbench

Developer Tools: Docker, Git, GitHub, Power BI, Deneb, Figma

Concepts: Distributed Systems, Concurrent Programming, Vector Databases, REST APIs, Data Modeling

Education

Manipal University Jaipur

Jaipur, India

B.Tech, Computer Science Engineering — Specialization: AI & Machine Learning

Certifications

Power BI Data Analyst Associate — Microsoft Certified (2025)

IBM Data Science Professional Certificate — IBM / Coursera (2025)

Google Data Analytics Professional Certificate — Google / Coursera (2024)
